

# CVE-2008-2224

[MITRE](#)[NVD](#)[CVE.ORG](#)[JSON API](#)[Print: PDF](#)

## Summary

|                        |                                                                                                                               |
|------------------------|-------------------------------------------------------------------------------------------------------------------------------|
| <b>CVE</b>             | CVE-2008-2224                                                                                                                 |
| <b>State</b>           | PUBLIC                                                                                                                        |
| <b>Assigner</b>        | cve@mitre.org                                                                                                                 |
| <b>Source Priority</b> | CVE Program / NVD first with legacy fallback                                                                                  |
| <b>Published</b>       | 2008-05-14 18:20:00 UTC                                                                                                       |
| <b>Updated</b>         | 2017-09-29 01:31:00 UTC                                                                                                       |
| <b>Description</b>     | Multiple PHP remote file inclusion vulnerabilities in SazCart 1.5.1, when register_globals is enabled, allow remote attackers |

## Risk And Classification

### Problem Types: CWE-94

## NVD Known Affected Configurations (CPE 2.3)

| Type        | Vendor                  | Product                 | Version | Update | Edition | Language |
|-------------|-------------------------|-------------------------|---------|--------|---------|----------|
| Application | <a href="#">Sazcart</a> | <a href="#">Sazcart</a> | 1.5.1   | All    | All     | All      |
| Application | <a href="#">Sazcart</a> | <a href="#">Sazcart</a> | 1.5.1   | All    | All     | All      |
