

# CVE-2008-2561

[MITRE](#)[NVD](#)[CVE.ORG](#)[JSON API](#)[Print: PDF](#)

## Summary

|                        |                                                                                                                                  |
|------------------------|----------------------------------------------------------------------------------------------------------------------------------|
| <b>CVE</b>             | CVE-2008-2561                                                                                                                    |
| <b>State</b>           | PUBLIC                                                                                                                           |
| <b>Assigner</b>        | cve@mitre.org                                                                                                                    |
| <b>Source Priority</b> | CVE Program / NVD first with legacy fallback                                                                                     |
| <b>Published</b>       | 2008-06-06 18:32:00 UTC                                                                                                          |
| <b>Updated</b>         | 2017-09-29 01:31:00 UTC                                                                                                          |
| <b>Description</b>     | Multiple cross-site scripting (XSS) vulnerabilities in 427BB 2.3.1 allow remote attackers to inject arbitrary web script or HTML |

## Risk And Classification

### Problem Types: CWE-79

## NVD Known Affected Configurations (CPE 2.3)

| Type        | Vendor                         | Product               | Version | Update | Edition | Language |
|-------------|--------------------------------|-----------------------|---------|--------|---------|----------|
| Application | <a href="#">Fourtrosevenbb</a> | <a href="#">427bb</a> | 2.3.1   | All    | All     | All      |
| Application | <a href="#">Fourtrosevenbb</a> | <a href="#">427bb</a> | 2.3.1   | All    | All     | All      |
