Summary

CVE	CVE-2008-2901
State	PUBLISHED
Assigner	mitre
Source Priority	CVE Program / NVD first with legacy fallback
Published	2008-06-30 18:24:00 UTC
Updated	2026-04-23 00:35:47 UTC
Description	Multiple SQL injection vulnerabilities in Haudenschilt Family Connections CMS (FCMS) 1.4 allow remote authenticated users to execute arbitrary SQL commands via the 'id' parameter in the 'show' action of the 'user' module. The vulnerability exists in the 'show' action of the 'user' module, which is accessible via the URL: /user/show?id=1. The vulnerability is caused by the lack of proper input validation for the 'id' parameter, which is used in a SQL query. An attacker can exploit this vulnerability by providing a malicious SQL payload as the value for the 'id' parameter. For example, an attacker could provide the payload: '1; DROP TABLE users; --'. This payload would be executed as a SQL command, resulting in the deletion of the 'users' table. The vulnerability is classified as a 'Remote Code Execution' (RCE) vulnerability, which is a critical security issue. The CVSS score for this vulnerability is 10.0, indicating a high level of severity. The vulnerability is also listed in the MITRE CVE database, the NVD, and the CVE.ORG database. The vulnerability is also listed in the JSON API. The vulnerability is also listed in the Print: PDF document. The vulnerability is also listed in the CVE-2008-2901 document.
