

# CVE-2008-3037

[MITRE](#)[NVD](#)[CVE.ORG](#)[JSON API](#)[Print: PDF](#)

## Summary

|                        |                                                                                                                               |
|------------------------|-------------------------------------------------------------------------------------------------------------------------------|
| <b>CVE</b>             | CVE-2008-3037                                                                                                                 |
| <b>State</b>           | PUBLIC                                                                                                                        |
| <b>Assigner</b>        | cve@mitre.org                                                                                                                 |
| <b>Source Priority</b> | CVE Program / NVD first with legacy fallback                                                                                  |
| <b>Published</b>       | 2008-07-07 18:41:00 UTC                                                                                                       |
| <b>Updated</b>         | 2017-08-08 01:31:00 UTC                                                                                                       |
| <b>Description</b>     | Cross-site scripting (XSS) vulnerability in the Address Directory (sp_directory) extension 0.2.10 and earlier for TYPO3 allow |

## Risk And Classification

### Problem Types: CWE-79

## NVD Known Affected Configurations (CPE 2.3)

| Type        | Vendor | Product           | Version | Update | Edition | Language |
|-------------|--------|-------------------|---------|--------|---------|----------|
| Application | Typo3  | Address Directory | All     | All    | All     | All      |

## References
