

# CVE-2008-3561

[MITRE](#)[NVD](#)[CVE.ORG](#)[JSON API](#)[Print: PDF](#)

## Summary

|                        |                                                                                                                        |
|------------------------|------------------------------------------------------------------------------------------------------------------------|
| <b>CVE</b>             | CVE-2008-3561                                                                                                          |
| <b>State</b>           | PUBLIC                                                                                                                 |
| <b>Assigner</b>        | cve@mitre.org                                                                                                          |
| <b>Source Priority</b> | CVE Program / NVD first with legacy fallback                                                                           |
| <b>Published</b>       | 2008-08-10 20:41:00 UTC                                                                                                |
| <b>Updated</b>         | 2017-08-08 01:31:00 UTC                                                                                                |
| <b>Description</b>     | SQL injection vulnerability in s03.php in Powergap Shopsystem, when magic_quotes_gpc is disabled, allows remote attack |

## Risk And Classification

### Problem Types: CWE-89

## NVD Known Affected Configurations (CPE 2.3)

| Type        | Vendor                   | Product                    | Version | Update | Edition | Language |
|-------------|--------------------------|----------------------------|---------|--------|---------|----------|
| Application | <a href="#">Powergap</a> | <a href="#">Shopsystem</a> | All     | All    | All     | All      |
| Application | <a href="#">Powergap</a> | <a href="#">Shopsystem</a> | All     | All    | All     | All      |
