

# CVE-2008-4604

[MITRE](#)[NVD](#)[CVE.ORG](#)[JSON API](#)[Print: PDF](#)

## Summary

|                        |                                                                                                                          |
|------------------------|--------------------------------------------------------------------------------------------------------------------------|
| <b>CVE</b>             | CVE-2008-4604                                                                                                            |
| <b>State</b>           | PUBLIC                                                                                                                   |
| <b>Assigner</b>        | cve@mitre.org                                                                                                            |
| <b>Source Priority</b> | CVE Program / NVD first with legacy fallback                                                                             |
| <b>Published</b>       | 2008-10-18 00:18:00 UTC                                                                                                  |
| <b>Updated</b>         | 2017-09-29 01:32:00 UTC                                                                                                  |
| <b>Description</b>     | SQL injection vulnerability in index.php in Easy CafeEngine 1.1 allows remote attackers to execute arbitrary SQL command |

## Risk And Classification

### Problem Types: CWE-89

## NVD Known Affected Configurations (CPE 2.3)

| Type        | Vendor                     | Product                        | Version | Update | Edition | Language |
|-------------|----------------------------|--------------------------------|---------|--------|---------|----------|
| Application | <a href="#">Cafeengine</a> | <a href="#">Easycafeengine</a> | 1.1     | All    | All     | All      |
| Application | <a href="#">Cafeengine</a> | <a href="#">Easycafeengine</a> | 1.1     | All    | All     | All      |
