CVE-2008-5427

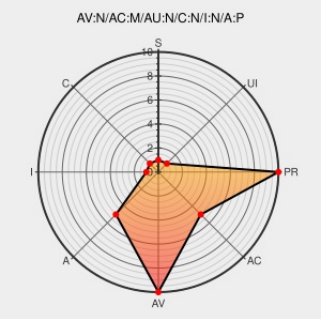
Source: Mitre | Source: NIST | CVE.ORG | Print: PDF



Certain versions of Norton Internet Security 2008 from Symantec contain the following vulnerability:

Norton Antivirus in Norton Internet Security 15.5.0.23 does not properly handle (1) multipart/mixed e-mail messages with many MIME parts and possibly (2) e-mail messages with many "Content-type: message/rfc822;" headers, which allows remote attackers to cause a denial of service (stack consumption or other resource consumption) via a large e-mail message, a related issue to CVE-2006-1173.

CVE-2008-5427 has been assigned by cve@mitre.org to track the vulnerability

CVSS2 Score: 4.3 - MEDIUM
