Summary

CVE	CVE-2008-6078
State	PUBLISHED
Assigner	mitre
Source Priority	CVE Program / NVD first with legacy fallback
Published	2009-02-06 11:30:00 UTC
Updated	2026-04-23 00:35:47 UTC
Description	SQL injection vulnerability in open.php in the Private Messaging (com_privmsg) component for Limbo CMS allows remote attackers to execute arbitrary SQL commands via the 'id' parameter. The vulnerability exists in the 'get_privmsg' function in open.php, which does not properly sanitize the 'id' parameter before using it in a SQL query. This allows an attacker to inject malicious SQL code that can be executed by the database. The vulnerability is present in versions of Limbo CMS prior to 1.0.0.

Risk And Classification

Primary CVSS: v2.0 7.5 from nvd@nist.gov
