

# CVE-2008-6280

[MITRE](#)[NVD](#)[CVE.ORG](#)[JSON API](#)[Print: PDF](#) 

## Summary

|                        |                                                                                                                              |
|------------------------|------------------------------------------------------------------------------------------------------------------------------|
| <b>CVE</b>             | CVE-2008-6280                                                                                                                |
| <b>State</b>           | PUBLIC                                                                                                                       |
| <b>Assigner</b>        | cve@mitre.org                                                                                                                |
| <b>Source Priority</b> | CVE Program / NVD first with legacy fallback                                                                                 |
| <b>Published</b>       | 2009-02-25 23:30:00 UTC                                                                                                      |
| <b>Updated</b>         | 2017-08-17 01:29:00 UTC                                                                                                      |
| <b>Description</b>     | Cross-site scripting (XSS) vulnerability in apply.cgi on the Linksys WRT160N allows remote attackers to inject arbitrary web |

## Risk And Classification

### Problem Types: CWE-79

## NVD Known Affected Configurations (CPE 2.3)

| Type     | Vendor                | Product                 | Version | Update | Edition | Language |
|----------|-----------------------|-------------------------|---------|--------|---------|----------|
| Hardware | <a href="#">Cisco</a> | <a href="#">Wrt160n</a> | -       | All    | All     | All      |
| Hardware | <a href="#">Cisco</a> | <a href="#">Wrt160n</a> | -       | All    | All     | All      |
