

# CVE-2008-6907

[MITRE](#)[NVD](#)[CVE.ORG](#)[JSON API](#)[Print: PDF](#)

## Summary

|                        |                                                                                                                           |
|------------------------|---------------------------------------------------------------------------------------------------------------------------|
| <b>CVE</b>             | CVE-2008-6907                                                                                                             |
| <b>State</b>           | PUBLIC                                                                                                                    |
| <b>Assigner</b>        | cve@mitre.org                                                                                                             |
| <b>Source Priority</b> | CVE Program / NVD first with legacy fallback                                                                              |
| <b>Published</b>       | 2009-08-06 17:30:00 UTC                                                                                                   |
| <b>Updated</b>         | 2017-09-29 01:33:00 UTC                                                                                                   |
| <b>Description</b>     | Multiple SQL injection vulnerabilities in checkuser.php in 2532designs 2532 Gigs 1.2.2 Stable, when magic_quotes_gpc is o |

## Risk And Classification

### Problem Types: CWE-89

## NVD Known Affected Configurations (CPE 2.3)

| Type        | Vendor                   | Product                  | Version | Update | Edition | Language |
|-------------|--------------------------|--------------------------|---------|--------|---------|----------|
| Application | <a href="#">2532gigs</a> | <a href="#">2532gigs</a> | 1.2.2   | All    | All     | All      |
| Application | <a href="#">2532gigs</a> | <a href="#">2532gigs</a> | 1.2.2   | All    | All     | All      |
