

# CVE-2009-0608

[MITRE](#)[NVD](#)[CVE.ORG](#)[JSON API](#)[Print: PDF](#)

## Summary

|                        |                                                                                                                                                                                                                        |
|------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>CVE</b>             | CVE-2009-0608                                                                                                                                                                                                          |
| <b>State</b>           | PUBLIC                                                                                                                                                                                                                 |
| <b>Assigner</b>        | cve@mitre.org                                                                                                                                                                                                          |
| <b>Source Priority</b> | CVE Program / NVD first with legacy fallback                                                                                                                                                                           |
| <b>Published</b>       | 2009-02-17 17:30:00 UTC                                                                                                                                                                                                |
| <b>Updated</b>         | 2018-10-10 19:29:00 UTC                                                                                                                                                                                                |
| <b>Description</b>     | Integer overflow in the showLog function in fake_log_device.c in liblog in Open Handset Alliance Android 1.0 allows attackers to execute arbitrary code or cause a denial of service (crash) via crafted log messages. |

## Risk And Classification

### Problem Types: CWE-189

## NVD Known Affected Configurations (CPE 2.3)

| Type        | Vendor                  | Product                     | Version | Update | Edition | Language |
|-------------|-------------------------|-----------------------------|---------|--------|---------|----------|
| Application | <a href="#">Android</a> | <a href="#">Android Sdk</a> | 1.0     | All    | All     | All      |
| Application | <a href="#">Android</a> | <a href="#">Android Sdk</a> | 1.0     | All    | All     | All      |
