| <b>Assigner</b>        | secalert_us@oracle.com                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>Source Priority</b> | CVE Program / NVD first with legacy fallback                                                                                                                                                                                                                                                                                                                                                                 |
| <b>Published</b>       | 2009-04-15 10:30:00 UTC                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>Updated</b>         | 2012-10-23 03:04:00 UTC                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>Description</b>     | Unspecified vulnerability in the Oracle Application Object Library component in Oracle E-Business Suite 12.0.6 allows remote users to bypass authentication and execute arbitrary code with root privileges. The vulnerability is due to a buffer overflow in the ALOL component. It is not known if the vulnerability can be exploited remotely. Oracle has released a patch to address this vulnerability. |

## Risk And Classification

**Problem Types:** NVD-CWE-noinfo

## NVD Known Affected Configurations (CPE 2.3)

| Type        | Vendor                 | Product                          | Version | Update | Edition | Language |
|-------------|------------------------|----------------------------------|---------|--------|---------|----------|
| Application | <a href="#">Oracle</a> | <a href="#">E-business Suite</a> | 12.0.6  | All    | All     | All      |
| Application | <a href="#">Oracle</a> | <a href="#">E-business Suite</a> | 12.0.6  | All    | All     | All      |
