

# CVE-2009-1022

[MITRE](#)[NVD](#)[CVE.ORG](#)[JSON API](#)[Print: PDF](#)

## Summary

|                        |                                                                                                                       |
|------------------------|-----------------------------------------------------------------------------------------------------------------------|
| <b>CVE</b>             | CVE-2009-1022                                                                                                         |
| <b>State</b>           | PUBLIC                                                                                                                |
| <b>Assigner</b>        | cve@mitre.org                                                                                                         |
| <b>Source Priority</b> | CVE Program / NVD first with legacy fallback                                                                          |
| <b>Published</b>       | 2009-03-20 00:30:00 UTC                                                                                               |
| <b>Updated</b>         | 2018-10-10 19:32:00 UTC                                                                                               |
| <b>Description</b>     | Heap-based buffer overflow in the Preview/ Set Segment function in Gretech GOMlab GOM Encoder 1.0.0.11 and earlier al |

## Risk And Classification

### Problem Types: CWE-119

## NVD Known Affected Configurations (CPE 2.3)

| Type        | Vendor | Product     | Version | Update | Edition | Language |
|-------------|--------|-------------|---------|--------|---------|----------|
| Application | Gomlab | Gom Encoder | All     | All    | All     | All      |
