CVE-2009-1597

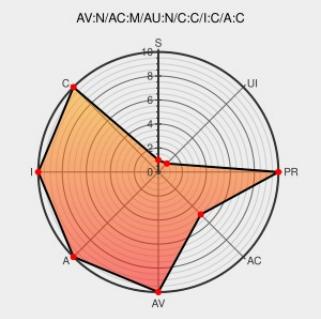
Source: Mitre | Source: NIST | CVE.ORG | Print: PDF



Certain versions of Acrobat Reader from Adobe contain the following vulnerability:

Mozilla Firefox executes DOM calls in response to a javascript: URI in the target attribute of a submit element within a form contained in an inline PDF file, which might allow remote attackers to bypass intended Adobe Acrobat JavaScript restrictions on accessing the document object, as demonstrated by a web site that permits PDF uploads by untrusted users, and therefore has a shared document.domain between the web site and this javascript: URI. NOTE: the researcher reports that Adobe's position is "a PDF file is active content."

CVE-2009-1597 has been assigned by cve@mitre.org to track the vulnerability

CVSS2 Score: 9.3 - HIGH
