CVE	CVE-2009-4709
State	PUBLIC
Assigner	cve@mitre.org
Source Priority	CVE Program / NVD first with legacy fallback
Published	2010-03-15 21:30:00 UTC
Updated	2010-03-16 15:03:00 UTC
Description	SQL injection vulnerability in the datamints Newsticker (datamints_newsticker) extension before 0.7.2 for TYPO3 allows remote users to execute arbitrary SQL commands by injecting a payload into the search parameter. The vulnerability is due to the fact that the search parameter is not properly sanitized before being used in a SQL query. This allows an attacker to inject a payload that will be executed by the database. The vulnerability is located in the datamints_newsticker extension, specifically in the search function. The vulnerability is a result of the fact that the search parameter is not properly sanitized before being used in a SQL query. This allows an attacker to inject a payload that will be executed by the database. The vulnerability is located in the datamints_newsticker extension, specifically in the search function.

Problem Types: CWE-89
