Description	Unrestricted file upload vulnerability in modules/gallery/models/item.php in Menalto Gallery before 3.0 and beta allows remote users to upload arbitrary files to the web server. The vulnerability exists because the application does not validate the file type before uploading it to the server. An attacker can exploit this by uploading a malicious file that can be executed on the server. The attacker can then use the file to perform various actions, such as installing a backdoor or stealing sensitive information. The vulnerability is fixed in version 3.0 and beta.
