Description	MyBB (aka MyBulletinBoard) before 1.4.12 does not properly restrict uid values for group join requests, which allows remote users to bypass authentication and execute arbitrary code via the group_join() function. The vulnerability exists in the group_join() function in group.php, which does not properly restrict the uid value to the current user's uid. This allows an attacker to bypass authentication and execute arbitrary code via the group_join() function in group.php. The vulnerability exists in the group_join() function in group.php, which does not properly restrict the uid value to the current user's uid.
