

# CVE-2011-3489

[MITRE](#)[NVD](#)[CVE.ORG](#)[JSON API](#)[Print: PDF](#)

## Summary

|                        |                                                                                                                             |
|------------------------|-----------------------------------------------------------------------------------------------------------------------------|
| <b>CVE</b>             | CVE-2011-3489                                                                                                               |
| <b>State</b>           | PUBLIC                                                                                                                      |
| <b>Assigner</b>        | cve@mitre.org                                                                                                               |
| <b>Source Priority</b> | CVE Program / NVD first with legacy fallback                                                                                |
| <b>Published</b>       | 2011-09-16 14:28:00 UTC                                                                                                     |
| <b>Updated</b>         | 2017-08-29 01:30:00 UTC                                                                                                     |
| <b>Description</b>     | RnaUtility.dll in Rsvchost.exe 2.30.0.23 in Rockwell RSLogix 19 and earlier allows remote attackers to cause a denial of se |

## Risk And Classification

### Problem Types: CWE-119

## NVD Known Affected Configurations (CPE 2.3)

| Type        | Vendor             | Product | Version | Update | Edition | Language |
|-------------|--------------------|---------|---------|--------|---------|----------|
| Application | Rockwellautomation | Rslogix | All     | All    | All     | All      |
