

CVE-2011-5054

Published on: 01/06/2012 12:00:00 AM UTC

Last Modified on: 03/23/2021 11:23:17 PM UTC

CVE-2011-5054

[Source: Mitre](#)[Source: NIST](#)[CVE.ORG](#)[Print: PDF](#) 

Certain versions of [Kcheckpass](#) from [Kde](#) contain the following vulnerability:

kcheckpass passes a user-supplied argument to the pam_start function, often within a setuid environment, which allows local users to invoke any configured PAM stack, and possibly trigger unintended side effects, via an arbitrary valid PAM service name, a different vulnerability than CVE-2011-4122. NOTE: the vendor indicates that the possibility of resultant privilege escalation may be "a bit far-fetched."

CVE-2011-5054 has been assigned by [M](#) cve@mitre.org to track the vulnerability

CVSS2 Score: **6.9 - MEDIUM**
