[CVE.ORG](#)

[Print: PDF](#)

Certain versions of [Web Gateway](#) from [Mcafee](#) contain the following vulnerability:

**** DISPUTED **** McAfee Web Gateway 7.0 allows remote attackers to bypass the access configuration for the CONNECT method by providing an arbitrary allowed hostname in the Host HTTP header. NOTE: this issue might not be reproducible, because the researcher did not provide configuration details for the vulnerable system, and the

observed behavior might be consistent with a configuration that was (perhaps inadvertently) designed to allow access based on Host HTTP headers.

CVE-2012-2212 has been assigned by [M](#) cve@mitre.org to track the vulnerability
