Summary

CVE	CVE-2012-2604
State	PUBLISHED
Assigner	certcc
Source Priority	CVE Program / NVD first with legacy fallback
Published	2012-06-13 15:55:01 UTC
Updated	2026-04-29 01:13:23 UTC
Description	Multiple cross-site scripting (XSS) vulnerabilities in GuestAccess.jsp in the Guest/Contractor access component in the admin console of the Cisco Unified Communications Manager (CUCM) 6.0(2) and 6.0(3) releases. The vulnerabilities are located in the GuestAccess.jsp file, which is used to display the Guest/Contractor access component in the admin console. The vulnerabilities are caused by the use of the JSP EL expression \${request.getParameter("id")} in the file, which does not properly sanitize the input. An attacker can exploit these vulnerabilities by sending a specially crafted request to the admin console, which will cause the browser to execute arbitrary JavaScript code. The vulnerabilities are identified by CVE-2012-2604, CVE-2012-2605, and CVE-2012-2606.

Risk And Classification

Primary CVSS: v2.0 3.5 from nvd@nist.gov
