

# CVE-2012-3343

[MITRE](#)[NVD](#)[CVE.ORG](#)[JSON API](#)[Print: PDF](#)

## Summary

|                        |                                                                                                                             |
|------------------------|-----------------------------------------------------------------------------------------------------------------------------|
| <b>CVE</b>             | CVE-2012-3343                                                                                                               |
| <b>State</b>           | PUBLIC                                                                                                                      |
| <b>Assigner</b>        | cve@mitre.org                                                                                                               |
| <b>Source Priority</b> | CVE Program / NVD first with legacy fallback                                                                                |
| <b>Published</b>       | 2012-06-09 00:55:00 UTC                                                                                                     |
| <b>Updated</b>         | 2012-06-11 04:00:00 UTC                                                                                                     |
| <b>Description</b>     | Cross-site request forgery (CSRF) vulnerability in Microdasys before 3.5.1-B708, as used in Bloxx Web Filtering before 5.0. |

## Risk And Classification

**Problem Types:** CWE-352

## NVD Known Affected Configurations (CPE 2.3)

| Type        | Vendor                | Product                       | Version | Update | Edition | Language |
|-------------|-----------------------|-------------------------------|---------|--------|---------|----------|
| Application | <a href="#">Bloxx</a> | <a href="#">Web Filtering</a> | All     | All    | All     | All      |
