CVE-2012-5811

Source: Mitre

Source: NIST

CVE.ORG

Print: PDF

Certain versions of Breezy from Breezy contain the following vulnerability:

The Breezy application for Android does not verify that the server hostname matches a domain name in the subject's Common Name (CN) or subjectAltName field of the X.509 certificate, which allows man-in-the-middle attackers to spoof SSL servers via an arbitrary valid certificate.

CVE-2012-5811 has been assigned by cve@mitre.org to track the vulnerability
