CVE-2013-1451

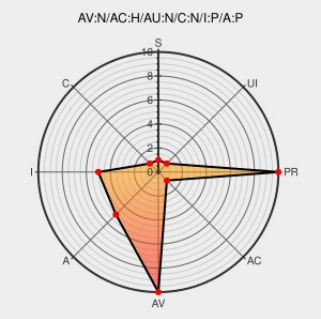
Source: Mitre | Source: NIST | CVE.ORG | Print: PDF



Certain versions of Internet Explorer from Microsoft contain the following vulnerability:

Microsoft Internet Explorer 8 and 9, when the Proxy Settings configuration has the same Proxy address and Port values in the HTTP and Secure rows, does not ensure that the SSL lock icon is consistent with the Address bar, which makes it easier for remote attackers to spoof web sites via a crafted HTML document that triggers many HTTPS requests to an arbitrary host, followed by an HTTPS request to a trusted host and then an HTTP request to an untrusted host, a related issue to CVE-2013-1450.

CVE-2013-1451 has been assigned by cve@mitre.org to track the vulnerability

CVSS2 Score: 4 - MEDIUM
