Summary

CVE	CVE-2013-3199
State	PUBLISHED
Assigner	microsoft
Source Priority	CVE Program / NVD first with legacy fallback
Published	2013-08-14 11:10:36 UTC
Updated	2026-04-29 01:13:23 UTC
Description	Microsoft Internet Explorer 6 through 10 allows remote attackers to execute arbitrary code or cause a denial of service (memory consumption) via crafted HTML documents, as demonstrated by a denial of service attack on a Windows 7 SP1 machine. CVE-2013-3199 is a memory consumption issue in the Internet Explorer rendering engine. It allows a remote attacker to cause a denial of service (memory consumption) by sending a crafted HTML document to the browser. The issue exists in the rendering engine, which is responsible for parsing and rendering HTML documents. The issue is caused by a buffer overflow in the rendering engine, which allows an attacker to overflow the memory buffer and cause a denial of service. The issue is fixed in Internet Explorer 11.0.9600.17131. CVE-2013-3199 is a memory consumption issue in the Internet Explorer rendering engine. It allows a remote attacker to cause a denial of service (memory consumption) by sending a crafted HTML document to the browser. The issue exists in the rendering engine, which is responsible for parsing and rendering HTML documents. The issue is caused by a buffer overflow in the rendering engine, which allows an attacker to overflow the memory buffer and cause a denial of service. The issue is fixed in Internet Explorer 11.0.9600.17131.
