

# CVE-2013-7179

[MITRE](#)[NVD](#)[CVE.ORG](#)[JSON API](#)[Print: PDF](#)

## Summary

|                        |                                                                                                                           |
|------------------------|---------------------------------------------------------------------------------------------------------------------------|
| <b>CVE</b>             | CVE-2013-7179                                                                                                             |
| <b>State</b>           | PUBLIC                                                                                                                    |
| <b>Assigner</b>        | cert@cert.org                                                                                                             |
| <b>Source Priority</b> | CVE Program / NVD first with legacy fallback                                                                              |
| <b>Published</b>       | 2014-02-04 05:39:00 UTC                                                                                                   |
| <b>Updated</b>         | 2015-12-18 17:46:00 UTC                                                                                                   |
| <b>Description</b>     | The ping functionality in cgi-bin/diagnostic.cgi on Seowon Intech SWC-9100 routers allows remote attackers to execute arb |

## Risk And Classification

### Problem Types: CWE-20

## NVD Known Affected Configurations (CPE 2.3)

| Type     | Vendor                       | Product                  | Version | Update | Edition | Language |
|----------|------------------------------|--------------------------|---------|--------|---------|----------|
| Hardware | <a href="#">Seowonintech</a> | <a href="#">Swc-9100</a> | -       | All    | All     | All      |
| Hardware | <a href="#">Seowonintech</a> | <a href="#">Swc-9100</a> | -       | All    | All     | All      |
