CVE-2013-7336

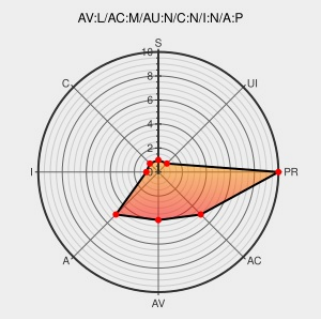
Source: Mitre | Source: NIST | CVE.ORG | Print: PDF



Certain versions of Opensuse from Opensuse contain the following vulnerability:

The qemuMigrationWaitForSpice function in qemu/qemu_migration.c in libvirt before 1.1.3 does not properly enter a monitor when performing seamless SPICE migration, which allows local users to cause a denial of service (NULL pointer dereference and libvirtd crash) by causing domblkstat to be called at the same time as the qemuMonitorGetSpiceMigrationStatus function.

CVE-2013-7336 has been assigned by cve@mitre.org to track the vulnerability
