CVE-2014-0169

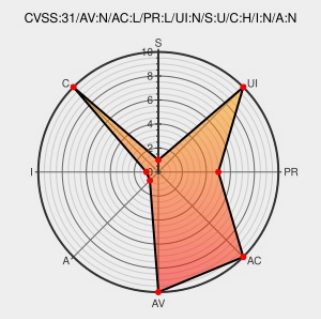
Source: Mitre | Source: NIST | CVE.ORG | Print: PDF



Certain versions of Jboss Enterprise Application Platform from Redhat contain the following vulnerability:

In JBoss EAP 6 a security domain is configured to use a cache that is shared between all applications that are in the security domain. This could allow an authenticated user in one application to access protected resources in another application without proper authorization. Although this is an intended functionality, it was not clearly documented which can mislead users into thinking that a security domain cache is isolated to a single application.

CVE-2014-0169 has been assigned by secalert@redhat.com to track the vulnerability - currently rated as MEDIUM severity.

Affected Vendor/Software: **Red Hat** - **JBoss EAP** version **= 6**

CVSS3 Score: 6.5 - MEDIUM

Attack Vector	Attack Complexity	Privileges Required	User Interaction
NETWORK	LOW	LOW	NONE
Scope	**Confidentiality Impact**	**Integrity Impact**	**Availability Impact**
UNCHANGED	HIGH	NONE	NONE

CVSS2 Score: 4 - MEDIUM

Access Vector	Access Complexity	Authentication
NETWORK	LOW	SINGLE
Confidentiality Impact	**Integrity Impact**	**Availability Impact**
PARTIAL	NONE	NONE
