Summary

CVE	CVE-2014-1773
State	PUBLISHED
Assigner	microsoft
Source Priority	CVE Program / NVD first with legacy fallback
Published	2014-06-11 04:56:16 UTC
Updated	2026-05-06 22:30:45 UTC
Description	Microsoft Internet Explorer 9 through 11 allows remote attackers to execute arbitrary code or cause a denial of service (memory consumption) via crafted HTML documents, as demonstrated by a denial of service attack. CVE-2014-1773 is a memory consumption issue in the HTML rendering engine. An attacker can cause a denial of service by sending a crafted HTML document to the browser. The browser will then consume a large amount of memory, leading to a crash. CVE-2014-1773 is a memory consumption issue in the HTML rendering engine. An attacker can cause a denial of service by sending a crafted HTML document to the browser. The browser will then consume a large amount of memory, leading to a crash.
