

# CVE-2014-8577

[MITRE](#)[NVD](#)[CVE.ORG](#)[JSON API](#)[Print: PDF](#)

## Summary

|                        |                                                                                                                                  |
|------------------------|----------------------------------------------------------------------------------------------------------------------------------|
| <b>CVE</b>             | CVE-2014-8577                                                                                                                    |
| <b>State</b>           | PUBLIC                                                                                                                           |
| <b>Assigner</b>        | cve@mitre.org                                                                                                                    |
| <b>Source Priority</b> | CVE Program / NVD first with legacy fallback                                                                                     |
| <b>Published</b>       | 2014-10-31 14:55:00 UTC                                                                                                          |
| <b>Updated</b>         | 2017-09-08 01:29:00 UTC                                                                                                          |
| <b>Description</b>     | Multiple cross-site scripting (XSS) vulnerabilities in Croogo before 2.1.0 allow remote attackers to inject arbitrary web script |

## Risk And Classification

### Problem Types: CWE-79

## NVD Known Affected Configurations (CPE 2.3)

| Type        | Vendor                 | Product                | Version | Update | Edition | Language |
|-------------|------------------------|------------------------|---------|--------|---------|----------|
| Application | <a href="#">Croogo</a> | <a href="#">Croogo</a> | All     | All    | All     | All      |
