Summary

CVE	CVE-2015-0036
State	PUBLISHED
Assigner	microsoft
Source Priority	CVE Program / NVD first with legacy fallback
Published	2015-02-11 03:00:46 UTC
Updated	2026-05-06 22:30:45 UTC
Description	Microsoft Internet Explorer 6 through 11 allows remote attackers to execute arbitrary code or cause a denial of service (memory consumption) via crafted HTML documents, as demonstrated by a denial of service attack on a Windows 7 virtual machine. The vulnerability exists in the HTML rendering engine, which does not properly validate the size of the HTML document. This allows an attacker to cause a denial of service by sending a large HTML document to the browser. The vulnerability is present in Internet Explorer 6 through 11.

Risk And Classification

Primary CVSS: v2.0 9.3 from nvd@nist.gov
