

# CVE-2015-0512

[MITRE](#)[NVD](#)[CVE.ORG](#)[JSON API](#)[Print: PDF](#)

## Summary

|                        |                                                                                                                              |
|------------------------|------------------------------------------------------------------------------------------------------------------------------|
| <b>CVE</b>             | CVE-2015-0512                                                                                                                |
| <b>State</b>           | PUBLIC                                                                                                                       |
| <b>Assigner</b>        | security_alert@emc.com                                                                                                       |
| <b>Source Priority</b> | CVE Program / NVD first with legacy fallback                                                                                 |
| <b>Published</b>       | 2015-02-02 01:59:00 UTC                                                                                                      |
| <b>Updated</b>         | 2015-09-17 16:33:00 UTC                                                                                                      |
| <b>Description</b>     | Open redirect vulnerability in EMC Unisphere Central before 4.0 allows remote attackers to redirect users to arbitrary web s |

## Risk And Classification

**Problem Types:** NVD-CWE-Other

## NVD Known Affected Configurations (CPE 2.3)

| Type        | Vendor | Product           | Version | Update | Edition | Language |
|-------------|--------|-------------------|---------|--------|---------|----------|
| Application | Emc    | Unisphere Central | All     | All    | All     | All      |
