Certain versions of [Ubuntu Linux](#) from [Canonical](#) contain the following vulnerability:

The `URLRequest::GetHSTSRedirect` function in `url_request/url_request.cc` in Google Chrome before 42.0.2311.90 does not replace the `ws` scheme with the `wss` scheme whenever an HSTS Policy is active, which makes it easier for remote attackers to obtain sensitive information by sniffing the network for WebSocket traffic.
