

CVE-2015-1571

Published on: 02/10/2015 12:00:00 AM UTC

Last Modified on: 03/23/2021 11:26:10 PM UTC

CVE-2015-1571

[Source: Mitre](#)[Source: NIST](#)[CVE.ORG](#)[Print: PDF](#) 

Certain versions of [Fortios](#) from [Fortinet](#) contain the following vulnerability:

**** DISPUTED **** The CAPWAP DTLS protocol implementation in Fortinet FortiOS 5.0 Patch 7 build 4457 uses the same certificate and private key across different customers' installations, which makes it easier for man-in-the-middle attackers to spoof SSL servers by leveraging the Fortinet_Factory certificate and private key. NOTE: FG-

IR-15-002 says "The Fortinet_Factory certificate is unique to each device ... An attacker cannot therefore stage a MitM attack."

CVE-2015-1571 has been assigned by [M](#) cve@mitre.org to track the vulnerability
