CVE-2015-2142

[Source: Mitre](#)[Source: NIST](#)[CVE.ORG](#)[Print: PDF](#) 

Certain versions of [Phpbugtracker](#) from [Phpbugtracker Project](#) contain the following vulnerability:

Multiple cross-site request forgery (CSRF) vulnerabilities in Issuetracker phpBugTracker before 1.7.0 allow remote authenticated users to (1) hijack the authentication of users for requests that cause an unspecified impact via the id parameter to project.php, (2) hijack the authentication of users for requests that cause an unspecified impact via the group_id parameter to group.php, (3) hijack the authentication of users for requests that delete statuses via the status_id parameter to status.php, (4) hijack the authentication of users for requests that delete severities via the severity_id parameter to severity.php, (5) hijack the authentication of users for requests that cause an unspecified impact via the priority_id parameter to priority.php, (6) hijack the authentication of users for requests that delete the operating system via the os_id parameter to os.php, (7) hijack the authentication of users for requests that delete databases via the database_id parameter to database.php, or (8) hijack the authentication of users for requests that delete sites via the site_id parameter to sites.php.

CVE-2015-2142 has been assigned by [M](#) cve@mitre.org to track the vulnerability - currently rated as **HIGH** severity.

CVSS3 Score: **8 - HIGH**

Attack Vector	Attack Complexity	Privileges Required	User Interaction
NETWORK	LOW	LOW	REQUIRED
Scope	Confidentiality Impact	Integrity Impact	Availability Impact
UNCHANGED	HIGH	HIGH	HIGH

CVSS2 Score: **6 - MEDIUM**

Access Vector	Access Complexity	Authentication
NETWORK	MEDIUM	SINGLE
