

# CVE-2015-3375

[MITRE](#)[NVD](#)[CVE.ORG](#)[JSON API](#)[Print: PDF](#)

## Summary

|                        |                                                                                                                             |
|------------------------|-----------------------------------------------------------------------------------------------------------------------------|
| <b>CVE</b>             | CVE-2015-3375                                                                                                               |
| <b>State</b>           | PUBLIC                                                                                                                      |
| <b>Assigner</b>        | cve@mitre.org                                                                                                               |
| <b>Source Priority</b> | CVE Program / NVD first with legacy fallback                                                                                |
| <b>Published</b>       | 2015-04-21 16:59:00 UTC                                                                                                     |
| <b>Updated</b>         | 2016-12-06 03:00:00 UTC                                                                                                     |
| <b>Description</b>     | Cross-site request forgery (CSRF) vulnerability in the Shibboleth Authentication module before 6.x-4.1 and 7.x-4.x before 7 |

## Risk And Classification

### Problem Types: CWE-352

## NVD Known Affected Configurations (CPE 2.3)

| Type        | Vendor | Product                   | Version | Update | Edition | Language |
|-------------|--------|---------------------------|---------|--------|---------|----------|
| Application | Niif   | Shibboleth Authentication | 7.x-4.0 | All    | All     | All      |
| Application | Niif   | Shibboleth Authentication | 7.x-4.0 | All    | All     | All      |
| Application | Niif   | Shibboleth Authentication | All     | All    | All     | All      |
