

# CVE-2015-8556

[MITRE](#)[NVD](#)[CVE.ORG](#)[JSON API](#)[Print: PDF](#)

## Summary

|                        |                                                                                      |
|------------------------|--------------------------------------------------------------------------------------|
| <b>CVE</b>             | CVE-2015-8556                                                                        |
| <b>State</b>           | PUBLIC                                                                               |
| <b>Assigner</b>        | cve@mitre.org                                                                        |
| <b>Source Priority</b> | CVE Program / NVD first with legacy fallback                                         |
| <b>Published</b>       | 2017-03-24 14:59:00 UTC                                                              |
| <b>Updated</b>         | 2017-03-27 19:15:00 UTC                                                              |
| <b>Description</b>     | Local privilege escalation vulnerability in the Gentoo QEMU package before 2.5.0-r1. |

## Risk And Classification

**Problem Types:** CWE-362

## NVD Known Affected Configurations (CPE 2.3)

| Type        | Vendor               | Product              | Version | Update | Edition | Language |
|-------------|----------------------|----------------------|---------|--------|---------|----------|
| Application | <a href="#">Qemu</a> | <a href="#">Qemu</a> | All     | All    | All     | All      |
