

# CVE-2016-1000006

[MITRE](#)[NVD](#)[CVE.ORG](#)[JSON API](#)[Print: PDF](#)

## Summary

|                        |                                                                                                                        |
|------------------------|------------------------------------------------------------------------------------------------------------------------|
| <b>CVE</b>             | CVE-2016-1000006                                                                                                       |
| <b>State</b>           | PUBLIC                                                                                                                 |
| <b>Assigner</b>        | cve@mitre.org                                                                                                          |
| <b>Source Priority</b> | CVE Program / NVD first with legacy fallback                                                                           |
| <b>Published</b>       | 2019-11-19 15:15:00 UTC                                                                                                |
| <b>Updated</b>         | 2023-11-07 02:29:00 UTC                                                                                                |
| <b>Description</b>     | hhvm before 3.12.11 has a use-after-free in the serialize_memoize_param() and ResourceBundle::__construct() functions. |

## Risk And Classification

### Problem Types: CWE-416

## NVD Known Affected Configurations (CPE 2.3)

| Type        | Vendor                   | Product              | Version | Update | Edition | Language |
|-------------|--------------------------|----------------------|---------|--------|---------|----------|
| Application | <a href="#">Facebook</a> | <a href="#">Hhvm</a> | All     | All    | All     | All      |
| Application | <a href="#">Facebook</a> | <a href="#">Hhvm</a> | All     | All    | All     | All      |
