

# CVE-2016-10385

[MITRE](#)[NVD](#)[CVE.ORG](#)[JSON API](#)[Print: PDF](#)

## Summary

|                        |                                                                                                                              |
|------------------------|------------------------------------------------------------------------------------------------------------------------------|
| <b>CVE</b>             | CVE-2016-10385                                                                                                               |
| <b>State</b>           | PUBLIC                                                                                                                       |
| <b>Assigner</b>        | product-security@qualcomm.com                                                                                                |
| <b>Source Priority</b> | CVE Program / NVD first with legacy fallback                                                                                 |
| <b>Published</b>       | 2017-08-18 18:29:00 UTC                                                                                                      |
| <b>Updated</b>         | 2018-04-19 01:29:00 UTC                                                                                                      |
| <b>Description</b>     | In all Qualcomm products with Android releases from CAF using the Linux kernel, a use-after-free vulnerability exists in IMS |

## Risk And Classification

**Problem Types:** CWE-416

## NVD Known Affected Configurations (CPE 2.3)

| Type             | Vendor                 | Product                 | Version | Update | Edition | Language |
|------------------|------------------------|-------------------------|---------|--------|---------|----------|
| Operating System | <a href="#">Google</a> | <a href="#">Android</a> | All     | All    | All     | All      |
| Operating System | <a href="#">Google</a> | <a href="#">Android</a> | All     | All    | All     | All      |
