## Summary

|                 |                                                                                                                              |
|-----------------|------------------------------------------------------------------------------------------------------------------------------|
| CVE             | CVE-2016-3932                                                                                                                |
| State           | PUBLISHED                                                                                                                    |
| Assigner        | google_android                                                                                                               |
| Source Priority | CVE Program / NVD first with legacy fallback                                                                                 |
| Published       | 2016-10-10 10:59:36 UTC                                                                                                      |
| Updated         | 2026-05-06 22:30:45 UTC                                                                                                      |
| Description     | mediaserver in Android before 2016-10-05 allows attackers to gain privileges via a crafted application, aka Android internal |

## Risk And Classification

**Primary CVSS:** v3.0 7.8 HIGH from nvd@nist.gov

CVSS:3.0/AV:L/AC:L/PR:N/UI:R/S:U/C:H/I:H/A:H

**EPSS:** 0.000430000 probability, percentile 0.130600000 (date 2026-05-07)

**Problem Types:** CWE-264 | n/a

| Version | Source       | Type    | Score | Severity | Vector                                       |
|---------|--------------|---------|-------|----------|----------------------------------------------|
| 3.0     | nvd@nist.gov | Primary | 7.8   | HIGH     | CVSS:3.0/AV:L/AC:L/PR:N/UI:R/S:U/C:H/I:H/A:H |
| 2.0     | nvd@nist.gov | Primary | 9.3   |          | AV:N/AC:M/Au:N/C:C/I:C/A:C                   |
