

# CVE-2016-9019

[MITRE](#)[NVD](#)[CVE.ORG](#)[JSON API](#)[Print: PDF](#)

## Summary

|                        |                                                                                                                             |
|------------------------|-----------------------------------------------------------------------------------------------------------------------------|
| <b>CVE</b>             | CVE-2016-9019                                                                                                               |
| <b>State</b>           | PUBLIC                                                                                                                      |
| <b>Assigner</b>        | cve@mitre.org                                                                                                               |
| <b>Source Priority</b> | CVE Program / NVD first with legacy fallback                                                                                |
| <b>Published</b>       | 2017-03-07 16:59:00 UTC                                                                                                     |
| <b>Updated</b>         | 2017-04-01 01:59:00 UTC                                                                                                     |
| <b>Description</b>     | SQL injection vulnerability in the activate_address function in framework/modules/addressbook/controllers/addressController |

## Risk And Classification

### Problem Types: CWE-89

## NVD Known Affected Configurations (CPE 2.3)

| Type        | Vendor                      | Product                      | Version | Update | Edition | Language |
|-------------|-----------------------------|------------------------------|---------|--------|---------|----------|
| Application | <a href="#">Exponentcms</a> | <a href="#">Exponent Cms</a> | All     | All    | All     | All      |
