

# CVE-2017-0205

[MITRE](#)[NVD](#)[CVE.ORG](#)[JSON API](#)[Print: PDF](#)

## Summary

|                        |                                                                                                                           |
|------------------------|---------------------------------------------------------------------------------------------------------------------------|
| <b>CVE</b>             | CVE-2017-0205                                                                                                             |
| <b>State</b>           | PUBLIC                                                                                                                    |
| <b>Assigner</b>        | secure@microsoft.com                                                                                                      |
| <b>Source Priority</b> | CVE Program / NVD first with legacy fallback                                                                              |
| <b>Published</b>       | 2017-04-12 14:59:00 UTC                                                                                                   |
| <b>Updated</b>         | 2017-07-11 01:33:00 UTC                                                                                                   |
| <b>Description</b>     | A remote code execution vulnerability exists when Microsoft Edge improperly accesses objects in memory. The vulnerability |

## Risk And Classification

### Problem Types: CWE-119

## NVD Known Affected Configurations (CPE 2.3)

| Type        | Vendor    | Product | Version | Update | Edition | Language |
|-------------|-----------|---------|---------|--------|---------|----------|
| Application | Microsoft | Edge    | All     | All    | All     | All      |
| Application | Microsoft | Edge    | All     | All    | All     | All      |

## References

| Reference                                                                                                                                    |
