

# CVE-2017-0233

[MITRE](#)[NVD](#)[CVE.ORG](#)[JSON API](#)[Print: PDF](#)

## Summary

|                        |                                                                                                                               |
|------------------------|-------------------------------------------------------------------------------------------------------------------------------|
| <b>CVE</b>             | CVE-2017-0233                                                                                                                 |
| <b>State</b>           | PUBLIC                                                                                                                        |
| <b>Assigner</b>        | secure@microsoft.com                                                                                                          |
| <b>Source Priority</b> | CVE Program / NVD first with legacy fallback                                                                                  |
| <b>Published</b>       | 2017-05-12 14:29:00 UTC                                                                                                       |
| <b>Updated</b>         | 2019-10-03 00:03:00 UTC                                                                                                       |
| <b>Description</b>     | An elevation of privilege vulnerability exists in Microsoft Edge that could allow an attacker to escape from the AppContainer |

## Risk And Classification

**Problem Types:** NVD-CWE-noinfo

## NVD Known Affected Configurations (CPE 2.3)

| Type        | Vendor                    | Product              | Version | Update | Edition | Language |
|-------------|---------------------------|----------------------|---------|--------|---------|----------|
| Application | <a href="#">Microsoft</a> | <a href="#">Edge</a> | All     | All    | All     | All      |
| Application | <a href="#">Microsoft</a> | <a href="#">Edge</a> | All     | All    | All     | All      |
