CVSS:30/AV:N/AC:H/PR:N/UI:N/S:U/C:H/I:N/A:N

Certain versions of [Heinekingmedia](#) from [Stashcat](#) contain the following vulnerability:

An issue was discovered in heinekingmedia StashCat through 1.7.5 for Android, through 0.0.80w for Web, and through 0.0.86 for Desktop. For authentication, the user password is hashed directly with SHA-512 without a salt or another key-derivation mechanism to enable a secure secret for authentication. Moreover, only the first 32 bytes of the hash

are used. This allows for easy dictionary and rainbow-table attacks if an attacker has access to the password hash.

CVE-2017-11131 has been assigned by [M](#) cve@mitre.org to track the vulnerability - currently rated as **MEDIUM** severity.
