

# CVE-2017-11706

[MITRE](#)[NVD](#)[CVE.ORG](#)[JSON API](#)[Print: PDF](#)

## Summary

|                        |                                                                                                                                           |
|------------------------|-------------------------------------------------------------------------------------------------------------------------------------------|
| <b>CVE</b>             | CVE-2017-11706                                                                                                                            |
| <b>State</b>           | PUBLIC                                                                                                                                    |
| <b>Assigner</b>        | cve@mitre.org                                                                                                                             |
| <b>Source Priority</b> | CVE Program / NVD first with legacy fallback                                                                                              |
| <b>Published</b>       | 2017-07-28 05:29:00 UTC                                                                                                                   |
| <b>Updated</b>         | 2017-08-15 17:43:00 UTC                                                                                                                   |
| <b>Description</b>     | The Boozt Fashion application before 2.3.4 for Android allows remote attackers to read login credentials by sniffing the network traffic. |

## Risk And Classification

### Problem Types: CWE-200

## NVD Known Affected Configurations (CPE 2.3)

| Type        | Vendor | Product | Version | Update | Edition | Language |
|-------------|--------|---------|---------|--------|---------|----------|
| Application | Boozt  | Boozt   | All     | All    | All     | All      |

## References
