

# CVE-2017-11721

[MITRE](#)[NVD](#)[CVE.ORG](#)[JSON API](#)[Print: PDF](#)

## Summary

|                        |                                                                                                                             |
|------------------------|-----------------------------------------------------------------------------------------------------------------------------|
| <b>CVE</b>             | CVE-2017-11721                                                                                                              |
| <b>State</b>           | PUBLIC                                                                                                                      |
| <b>Assigner</b>        | cve@mitre.org                                                                                                               |
| <b>Source Priority</b> | CVE Program / NVD first with legacy fallback                                                                                |
| <b>Published</b>       | 2017-08-03 08:29:00 UTC                                                                                                     |
| <b>Updated</b>         | 2017-11-08 02:29:00 UTC                                                                                                     |
| <b>Description</b>     | Buffer overflow in ioquake3 before 2017-08-02 allows remote attackers to cause a denial of service (application crash) or p |

## Risk And Classification

### Problem Types: CWE-119

## NVD Known Affected Configurations (CPE 2.3)

| Type        | Vendor   | Product  | Version | Update | Edition | Language |
|-------------|----------|----------|---------|--------|---------|----------|
| Application | ioquake3 | ioquake3 | All     | All    | All     | All      |
