

# CVE-2017-12779

[MITRE](#)[NVD](#)[CVE.ORG](#)[JSON API](#)[Print: PDF](#)

## Summary

|                        |                                                                                                                                |
|------------------------|--------------------------------------------------------------------------------------------------------------------------------|
| <b>CVE</b>             | CVE-2017-12779                                                                                                                 |
| <b>State</b>           | PUBLIC                                                                                                                         |
| <b>Assigner</b>        | cve@mitre.org                                                                                                                  |
| <b>Source Priority</b> | CVE Program / NVD first with legacy fallback                                                                                   |
| <b>Published</b>       | 2017-11-10 02:29:00 UTC                                                                                                        |
| <b>Updated</b>         | 2017-11-28 19:33:00 UTC                                                                                                        |
| <b>Description</b>     | The Node_GetData function in corec/corec/node/node.c in mkvalidator 0.5.1 allows remote attackers to cause a denial of service |

## Risk And Classification

**Problem Types:** CWE-476

## NVD Known Affected Configurations (CPE 2.3)

| Type        | Vendor                   | Product                     | Version | Update | Edition | Language |
|-------------|--------------------------|-----------------------------|---------|--------|---------|----------|
| Application | <a href="#">Matroska</a> | <a href="#">Mkvalidator</a> | 0.5.1   | All    | All     | All      |
| Application | <a href="#">Matroska</a> | <a href="#">Mkvalidator</a> | 0.5.1   | All    | All     | All      |
