CVE-2017-14508

[Source: Mitre](#)[Source: NIST](#)[CVE.ORG](#)[Print: PDF](#) 

Certain versions of [Sugarcrm](#) from [Sugarcrm](#) contain the following vulnerability:

An issue was discovered in SugarCRM before 7.7.2.3, 7.8.x before 7.8.2.2, and 7.9.x before 7.9.2.0 (and Sugar Community Edition 6.5.26). Several areas have been identified in the Documents and Emails module that could allow an authenticated user to perform SQL injection, as demonstrated by a backslash character at the end of a

bean_id to modules/Emails/DetailView.php. An attacker could exploit these vulnerabilities by sending a crafted SQL request to the affected areas. An exploit could allow the attacker to modify the SQL database. Proper SQL escaping has been added to prevent such exploits.

CVE-2017-14508 has been assigned by [M](#) cve@mitre.org to track the vulnerability - currently rated as **HIGH** severity.
