Last Modified on: 01/19/2023 08:32:00 PM UTC

## CVE-2017-16287

[Source: Mitre](#)[Source: NIST](#)[CVE.ORG](#)[Print: PDF](#)

CVSS:31/AV:N/AC:L/PR:L/UI:N/S:C/C:H/I:H/A:H

Certain versions of [Hub](#) from [Insteon](#) contain the following vulnerability:

Multiple exploitable buffer overflow vulnerabilities exist in the PubNub message handler for the "cc" channel of Insteon Hub running firmware version 1012. Specially crafted commands sent through the PubNub service can cause a stack-based buffer overflow overwriting arbitrary data. An attacker should send an authenticated HTTP request to trigger this vulnerability. In cmd s\_time, at 0x9d018f00, the value for the `dstend` key is copied using `strcpy` to the buffer at `\$sp+0x270`. This buffer is 16 bytes large, sending anything longer will cause a buffer overflow.

CVE-2017-16287 has been assigned by [talos-cna@cisco.com](#) to track the vulnerability - currently rated as **CRITICAL** severity.

Affected Vendor/Software: [Cisco](#) **Insteon - Hub** version = **Not specified**

CVSS3 Score: **9.9 - CRITICAL**

| Attack Vector  | Attack Complexity      | Privileges Required | User Interaction    |
|----------------|------------------------|---------------------|---------------------|
| <b>NETWORK</b> | <b>LOW</b>             | <b>LOW</b>          | <b>NONE</b>         |
| Scope          | Confidentiality Impact | Integrity Impact    | Availability Impact |
| <b>CHANGED</b> | <b>HIGH</b>            | <b>HIGH</b>         | <b>HIGH</b>         |
