

# CVE-2017-16308

[MITRE](#)[NVD](#)[CVE.ORG](#)[Print: PDF](#) 

## Summary

|                        |                                                                                                                              |
|------------------------|------------------------------------------------------------------------------------------------------------------------------|
| <b>CVE</b>             | CVE-2017-16308                                                                                                               |
| <b>State</b>           | PUBLIC                                                                                                                       |
| <b>Assigner</b>        | talos-cna@cisco.com                                                                                                          |
| <b>Source Priority</b> | CVE Program / NVD first with legacy fallback                                                                                 |
| <b>Published</b>       | 2023-01-11 22:15:00 UTC                                                                                                      |
| <b>Updated</b>         | 2023-01-19 21:07:00 UTC                                                                                                      |
| <b>Description</b>     | Multiple exploitable buffer overflow vulnerabilities exist in the PubNub message handler for the "cc" channel of Insteon Hub |

## Risk And Classification

### Problem Types: CWE-121

## NVD Known Affected Configurations (CPE 2.3)

| Type             | Vendor                  | Product                      | Version | Update | Edition | Language |
|------------------|-------------------------|------------------------------|---------|--------|---------|----------|
| Hardware         | <a href="#">Insteon</a> | <a href="#">Hub</a>          | -       | All    | All     | All      |
| Operating System | <a href="#">Insteon</a> | <a href="#">Hub Firmware</a> | 1012    | All    | All     | All      |
